SUMMARY

Computer Science graduate and Software Developer with hands-on experience building full-stack web applications using React, Spring Boot, and RESTful APIs. Experienced in backend development, database integration, authentication, and frontend development, with additional experience developing Python backend features and vector database architecture for an AI Voice Assistant. Strong problem-solving and analytical skills focused on building practical software solutions.

TECHNICAL SKILLS

- Frontend: HTML/CSS, JavaScript, TypeScript, React, Next.js
- Backend: Java, Spring Boot, Node.js, Python
- Databases: Supabase/PostgreSQL, MongoDB, MySQL
- AI Development: AI Agent Development, Prompt Engineering, Vector Database
- Tools: Git/GitHub/GitLab, Docker, Figma, Vercel

WORK EXPERIENCE

Software Developer Intern - FORVIZ COMPANY LIMITED

Jan 2026 - April 2026

- Developed Python backend features for an AI Voice Assistant using Google ADK, Gemini Live API, and Qdrant, supporting natural-language queries for shopping mall events, promotions, and store information.
- Built an end-to-end retrieval pipeline covering API data ingestion, data processing, embedding generation, Qdrant indexing, semantic retrieval, and AI Agent response.
- Implemented search_event and search_promotion as Google ADK Agent Tools, enabling the Agent to route user queries to the appropriate retrieval function based on intent.
- Designed Agent-to-Frontend data flow over WebSocket to synchronize retrieved information and AI voice responses with the kiosk interface.
- Designed a multi-project Qdrant architecture using isolated collections per Project ID to prevent knowledge-base overlap and support reusable retrieval infrastructure.
- Developed hands-free voice-controlled system termination for kiosk interaction and created scenario-based tests covering response accuracy, latency, retrieval behavior, and frontend-data consistency.

PROJECTS

One Flag Thailand

Production website for the One Flag Thailand initiative.

- Developed the production website using Next.js, TypeScript, and Tailwind CSS, with Sanity CMS for dynamic content management. Deployed and maintained through Vercel.
- oneflagthailand.com

Personal Bookmark Manager

Full-stack web application for organizing personal bookmarks.

- Built a full-stack bookmark management application using React, Vite, Node.js, Prisma, and SQLite, with Auth0 authentication and user-scoped data access.
- Implemented Collections and Bookmarks CRUD, REST API integration, filtering, and responsive UI.
- Developed automated testing with 52 backend tests and 8 Playwright E2E tests across desktop and mobile scenarios.

Trainee Knowledge Assistant

AI-powered knowledge assistant with document context and multi-user access.

- Built a full-stack knowledge assistant using Next.js, TypeScript, SQLite, and Drizzle ORM, with authentication, protected routes, and user-scoped data access.
- Implemented PDF/TXT upload, AI chat with document context, streaming responses, conversation history, and source citations for contextual answers.
- Designed a layered application architecture separating middleware, API routes, services, and repositories, with Docker Compose and health checks for local deployment.

UniFood

Restaurant review platform with rankings, filtering, and user ratings.

- Built a full-stack restaurant review platform using React, Spring Boot, and MongoDB, implementing RESTful APIs for restaurant data, rankings, filtering, and user reviews.
- Implemented JWT authentication and role-based access control for authenticated user and administrative operations.

EDUCATION

Bachelor of Science Computer Science

Aug 2022 - May 2026

University of the Thai Chamber of Commerce (UTCC)

GPAX: 3.44 (Second-Class Honors)

ACTIVITIES

2nd place at the university showcase 2026:

Final Project 2D Pixel Art Game. (Unity, C#)

LANGUAGES

- Thai - Native
- English - Good reading documentation & communication
